                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A.

The invention relates to detecting differential expression of one or more nucleic acid sequences (appearing as ARA0456-ARA0448) in a biological sample comprising obtaining the sample from a subject, and detecting a change in the expression level of one or more nucleic acid sequences, relative to a control expression level of the nucleic acid sequences, is new. Also included are detecting cancer (or a pre-malignant condition thereof) in a subject (comprising comparing the expression level of one or more nucleic acid sequences in each of concern control expression level of the nucleic acid sequences, where a change of at least two-fold in the expression level of the nucleic acid sequences is indicative of cancer or pre-malignant condition) in a subject (by detecting in a pological sample from the nucleic acid sequences, repetating the first step at a subsequent point in time condition in a subject (by detecting in a ploiggical sample of the expression level is indicative of progression level detected, where a change in the expression level is indicative of progression level is indicative of progression level detected, where a change in the expression level is indicative of progression level detected, where a change in the expression level is indicative of progression level of progression level of the subject), determining the expression level is indicative of progression level with a reference progression level of the subject of the subject (comparison), determining the efficacy of a test compound for inhibiting cancer in a subject, inhibiting cancer in a subject, inhibiting cancer in a subject, inhibiting cancer in a subject, inhibiting cancer in a subject, inhibiting cancer in a subject, inhibiting cancer in a subject, inhibiting cancer in a subject, inhibiting cancer in a subject, inhibiting cancer in a subject, inhibiting cancer in a subject. Inhibiting cancer in a subject or and prognosis for an experience and electring in a prognosis for an experience and electring in a prognosis for an experience and elect

The present invention describes colon tumour associated proteins (I) and the present invention describes colon tumour associated proteins (I) and (II) can be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TCAP) expression, such as colonic cancer. For example, (I) and (II) may be used to trreat disorders associated with decreased expression by rectifying contextions or deletions in a patient's genome that affect the activity of TCAPs by expressing inactive proteins or to supplement the patients own production of them. Additionally, (II) may be used to produce the TCAP proteins, by inserting the nucleic acids into a host cell culturing the cell to express the protein. (II) and its complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (I) may also be used as antigens in the production of antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity. Anti-(I) antibodies and activity. The anti-(I) artibodies may also be used as diagnostic agents for detecting the presence of TCAPs in an assays to identify modulators of antibodies may also be used as diagnostic agents for detecting the presence of TCAPs in the activity. The anti-(I) antibodies may also be used as diagnostic agents for detecting the presence of TCAPs in the exemplification of the exemplification of the expression of a mine activity of antibodies may also be used as diagnostic agents for detecting the presence of TCAPs in the exemplification of the exemplification of the exemplification of the exemplification of the exemples in the exemplification of the exemples in the exemplification of the exemples in the exemples in the exemples in the exemples in the exemples in the exemples in the exemples in the exemples in the exemples in the e
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                rThrProThr-----SerSerTh 1293

                                                                                                                                                                                                                                                                                                                                                                The present invention describes compounds (1) for the immunotherapy and diagnosis of colon cancer. Also described. (1) a method for detecting the presence of cancer in a patient; (2) a method for stimulating and/or expanding T cells specific for a tumour protein; (3) an isolated T cell spoulation comprising T cells prepared by the method of (2); (4) a method for stimulating an immune response in a patient; (5) a method for treating cancer in a patient; and (6) a method for inhibiting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              r MJ, Stolk JA;

Identifying modulators of the p53 pathway for use in treating apoptotic or cell proliferation disorders, comprises screening for agents that modulate activity of a human ortholog of genes that modify the p53 pathway in Drosophila.

Funke RP;

Ď,

Example 2; Page 623-639; 678pp; English.

The invention relates to identifying (M1) a candidate p53 pathway condulating agent, by contacting an assay system comprising a purified HM modulating agent, by contacting an assay system comprising a purified HM Drosophila) or nucleic acid with a test agent under conditions, where but for the presence of the test agent, the system provides a reference activity, and detecting a test agent-biased activity of the assay system. Also included are modulating (M2) a p53 pathway of a contacting a cell defective in p53 function with a candidate modulator that specifically binds to a HM polypeptide comprising an HM amino acid sequence, where p53 function is restored, modulating (M3) a p53 pathway in a mammalian cell (comprising contacting the cell with an agent that specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) a pstient (comprising contacting the cell with an agent that comprising contacting the sample with a probe for HM expression; (C) comparing the results with a control; and (d) determining whether the comparison indicates a likelihood disease) (M1) is useful for diagnosing breast, colon, kidney, lung and ovarian cancer, is useful for diagnosing breast, colon, kidney, lung and ovarian cancer, contieration disorders (e.g. cancer). Another two new methods (M2 and therapeutic applications, where disease or disorder prognosis is related to defects in the p53 pathway, such as, angiogenesis, apoptotic or cell crodification of the cell, so that the cell undergoes normal comparison or progression through the cell undergoes normal comparing the p53 pathway such as angiogenic, also useful for medulating the p53 pathway such as angiogenic, also useful for treating defects in the p53 pathway such as angiogenic, concert coll proliferation disorders. The present sequence also useful for treating defects in the p53 pathway such as angiogenic, concerts a buman p53 pathway modifying protein

The invention discloses a composition comprising two or more isolated rate or human polynuclectides or a polynuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynuclectide, a host cell comprising the vector, a method for identifying a nuclectide sequence which is differentially regulated in an animal subjected to pain and a gent to perform the method, an array, a method for identifying an agent that is differentially expression of the polynuclectide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynuclectide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound for identifying a compound useful in treating compound for identifying a compound useful in treating compound that animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating compulates its activity is useful for preparing a medicament for treating compulates its activity is useful for preparing a medicament for treating compulates its activity is useful for preparing a medicament for treating compulates its activity is useful for preparing a medicament for treating compulates its activity is useful for preparing a medicament for treating compulates its activity is useful for preparing a medicament for treating compulates its activity is useful for preparing a medicament for treating compulates its activity is useful for preparing a medicament for treating compulates. The sequence presented is a human protein (described in Table 3 for the specification, but was obtained in electronic form directly from WiPo at the specification, but was obtained in electronic form directly from WiPo at the compulation of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ------ SerSerTh 1293

comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polymucleotides a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating continuous and animal of one or more of the polymetides given in the specification, a method for identifying a compound useful in treating continuous and a pharmaceutical composition comprising the one or more of polymetides or their antibodies. The polymucleotide or the compound that condulates its activity is useful for preparing a medicament for treating continuous (CI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human procein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: the sequence data for this patent did not form part of the printed continuous contin Etp.wipo.int/pub/published\_pct\_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises a method for diagnosing colon cancer in an individual, the method involves obtaining a serum sample from the individual and detecting the presence of either TIMP1 or Reg1-alpha and an additional colorectal cancer-associated marker. The method of the invention is useful for diagnosing colon cancer in an individual. The present amino acid sequence represents a human colorectal cancer-sssociated protein of the invention.

The invention relates to a method of identifying a mammal that will respond therapeutically to a method of treating cancer by administering an epidermal growth factor receptor (EGRR) modulator by comparing the level of a biomarker in a mammal before and after exposure to an EGRR modulator. The method comprises: (a) measuring, in the mammal, the level of at least one biomarker identified in the specification; (b) exposing the mammal to the EGRR modulator; and (c) measuring in the mammal the level of the biomarker, where a difference in the level in step (c) compared to step (a) indicates that the mammal will respond therapeutically to the method of treating cancer. The method and biomarkers are useful for identifying a mammal that will respond therapeutically to a method of treating cancer by administering and therapeutically to one of the biomarkers whose levels of expression is measured in the method of the invention. will respond therapeutically to a method of comparing the level of a biomarker in a mammal to an epidermal growth factor receptor (EFGR) ID NO 151; 520pp; English. treating cancer comprises before and after exposure Identifying a mammal that Disclosure; SEQ modulator

The present invention provides polynucleotides that inhibit expression of polypeptides such as the ubiquitin conjugating enzyme UbcH7, the ubiquitin protein ligase E6-AP, mucin-1 or mucin-2. The polynucleotides considers may be RNA polynucleotides that include a sense strand and an antisense strand. The sense strand of the RNA polynucleotide comprises a sequence of 16-30 nucleotides that is substantially identical to consecutive nucleotides and mRNA encoding the target polypeptide. The consecutive administration can be to a subject, preferably a human, and can occur during surgical resection of a tumor or resection of mucinous material. Claimed methods for treating cancer include administering a polynucleotide, preferably an RNA polynucleotide, of the invention to a subject that has, or is a trisk for, an endocrine-related cancer, such as the consection of an encoring coverproduction, such as colon cancer, breast cancer or pseudomyxoma coverproduction, such as colon cancer, breast cancer or pseudomyxoma coverproduction, such as sociated with the cancer is decreased. The present sequence is that of human intestinal mucin. mRNA for MUC2 represents a target for gene silenoing using RNA polynucleotides of the invention AEA27627 and AEA27630. New RNA polynucleotide, encoding a UbcH7, E6-AP, mucin-1, or mucin-2 polypeptide, useful for treating cancer, e.g. breast, prostate, or colon

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                      This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               267

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences AB067826-80804396. represent P. aeruginosa polypepitides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  204
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     205 ATCCGACATCTACCTGCTCGACGACCCCCAGAAGCCCTTGCCGCCGCGCCCCTTAT 264
                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to Pseudomonas aeruginosa polypeptides and the polynuclectides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant components for allowed peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa caused infection, and in detection of P. aeruginosa sequences or other sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   101 AlaGlyArgGlnProdlyGlnProProGlyHisAlaProGlyProGlyArgGlnProAla 120

from human cDNA libraries which can be used for gene therapy or in vaccines. The polymucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          369

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention

            This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and tratment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity, the antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           업
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                              The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                          313

                                                                                                                                                                                                                                                                                                                            The invention relates to forming (M1) an isolated ribonucleoprotein (RNP) complex (C), involves contacting an RNA affinity substrate (S) comprising C an RNP assembly sequence (AS) and an affinity rag, with a protein mixture to permit formation of (C) on AS, subjecting (C) to chromatographic c separation, and subjecting (C) to affinity selection, where the affinity c tag (e.g. bacteriophage MS2 coat protein in a fusion protein with E. coli malcose binding protein) binds to an affinity matrix. Also included are an isolated spliceosome preparation (isolated by (M1)), a RNA comprising an ENP complex binding site and at least one phage coat protein cracognition site, a nucleic acid encoding the RNA, and treating (M2) a subject having a disorder associated with abnormal RNP complexes (by obtaining a sample of cells from a subject, purifying RNP complexes (by obtaining a sample of cells from a subject, purifying RNP complexes (by complex selected from a subject. (M1) determining the presence in the complex selected from a spliceosomal complex, and normalising the amount of RNPs in the subject. (M1) is useful for forming an isolated RNP complex, an mRNA export complex, or an H complex. (M1) is useful for forming an isolated RNP complex, an mix and adagnostic assay for determining whether a subject has abnormal RNP complexes (M2) is useful for treating a subject has a disorder associated with abnormal RNP complexes. (M2) is useful for treating a subject has a complex. The present sequence represents a putative novel human complex. The present sequence represents a putative novel human complex. In the present sequence is not shown in the specification complex. In the specification of the specification is solved the information provided in table 2 of the specification.
                                                                                                                                                                                                                               Isolating ribonucleoprotein complex, by contacting RNA affinity substrate having ribonucleoprotein assembly sequence and affinity tag, with protein mixture, subjecting complex formed to chromatography, affinity selection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                43 AACACGCAGCCTCATTTCCCTTTTATGCCTCCTTCTCTGTTCATGTTCTTCATGGTTGCC 102

PA (RIGE-) RIGEL PHARM INC.  XX  PI Lorens JB, Atchison RE, Friera A, Holland S;  XX  DR  W-PSDB; ADN60279.  XI Identifying a compound that modulates angiogenesis or tumorigenesis, useful in diagnosing and treating angiogenesis, cancer, stroke, infertility and heart disease, comprises contacting the compound with angiogenesis polypeptide.  XX  PT  Magiogenesis polypeptide.  XX  XX  Disclosure; Page 70-71; 105pp; English.  XX  CThe present invention describes a method for identifying a compound that	CC modulates anglogenesis or tumourigenesis. The method comprises: (a) contacting the compound with anglogenesis polypeptide, e.g. Ax1, tubulin coffector D. transglutaminase 2, cytosine deaminase, peptidase M41 confector D. transglutaminase 2, cytosine deaminase, peptidase M41 cc (paraplegin), CD13 aminopeptidase, PPK-1, zip kinase, Gas6, SRm160, non-semblorin, novel zinc finger helicase (FLU2261), plexin-A2, cc deoxycytidylate deaminase or novel sugar transporter, novel cunctional effector of the compound upon the anglogenesis polypeptide or the physical effect of the compound upon the target polypeptide or its fragment or inactive variant; and (c) determining the chemical or compound that modulates cell comprising the chemical or compound that modulates cell cycle arrest. Also described is a method of condulating anglogenesis in a subject. The anglogenesis or tumourigenesis condulating compound has antianglogenic, cytostatic, cerebroprotective, vasotropic, antiherility and cardiant activities, and can be used in antibody, antisense and RNA interference (RNA) therapies. The methods and compounds or compositions are useful in diagnosing and treating cuptenese text and compound that modulates anglogenesis. The methods and compounds or compositions are useful in diagnosing and treating cyclence represents a human splicing coactivator submit SRm300 protein, which is used in the exemplification of the present invention. invention describes a method for identifying a compound that ngiogenesis. The method comprises: (a) the compound with angiogenesis polypeptide, e.g. Ax1, tubulin transglutaminase 2, cytosine deaminase, peptidase M41.

Langulutaminase 2, cytosine deaminase, peptidase M41.

Langulutaminase 2, cytosine deaminase, peptidase M41.

Langulutaminase 2, cytosine deaminase, peptidase M41.

In heavy chain, calmodulin 2, novel symporter, novel novel zinc finger helicase (FLJ22611), plaxin-A2.

Iate deaminase or novel sugar transporter; (b) determining the effector of the compound upon the angiogenesis polypeptide or its inactive variant; and (c) determining the chemical or effect of the compound upon a cell comprising the target or its inactive variant; and (c) determining the chemical or effect of the compound upon a cell comprising the target or its in modulates cell cycle arrest. Also described is a method of angiogenesis in a subject. The angiogenesis or tumourigenesis antimicrility and cardiant activities, and can be used in attience and RNA interference (RNA) therapies. The methods antisense and RNA interference (RNA) therapies. The methods should be an unit of angiogenesis. The methods is concern, stroke, infertility and heart disease. The present presents a human splicing coactivator subunit SRM300 protein, and in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DAGCCTCATITICCCTITITATGCCTCCTTCTCTGTTCATGTTCTTCATGGTTGCC 102

8 % 8 6 6 6 6 6 6 යි රි The present invention describes a method for identifying a compound that modulates angiogenesis or tumourigenesis. The method comprises: (a) contacting the compound with angiogenesis polypeptide. e.g. Ax1, tubulin confactor D, transglutaminase 2, cytosine deaminase, gas6, SRm160, non-muscle myosin heavy chain, calmedulin 2, novel symporter, novel coffered and neavy chain, calmedulin 2, novel symporter, novel compound upon the angiogenesis polypeptide or compound upon the angiogenesis polypeptide or the physical effect of the compound upon the angiogenesis polypeptide or transporter in active variant; and (c) determining the chamical or the physical effect of the compound upon the angiogenesis polypeptide or transporter in active variant; and (c) determining the chamical or phenotypic effect of the compound upon a cell comprising the target polypeptide or its fragment or inactive variant, thus identifying a compound that modulates cell cycle arrest. Also described is a method of modulating angiogenesis in a subject. The angiogenesis or tumourigenesis compound that modulates and RNA innerference (RNAi) therapies. The methods and compounds or compositions are useful in dientifying a compound that modulates angiogenesis. The methods and compounds or compositions are useful in dientifying a compound that modulates angiogenesis. The methods and compounds or compositions are useful in dientifying angiogenesis, cancer, stroke, infertility and heart disease. The present sequence represents a human serine/arginine repetitive matrix 2 protein, which is used in the exemplification of the present invention.                                                                                                                                                                                                                                                                                                                                     The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therefore therapy of pathological conditions resulting from a prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, or the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. reartment of P. aeruginosa-caused infection, and in detection of P. reartment of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this parent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                 Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ---- CCGGCACACCCCTCATAACAA 198

Novel isolated nucleic	userui as molecurai cargets lor diagnostics, prophylaxis and treatment pathological conditions resulting from bacterial infection.	PS Disclosure; SEQ ID NO 23696; 455pp; English.	AA. C. The invention relates to Pseudomonas aeruginosa polypeptides and the C. polynucleotides encoding them. The sequences are useful in diagnosis and C. therapy of pathological conditions, as molecular targets for diagnostics,			CC production of P. aeruginosa-derived peptides or polypeptides, as target CC components for diagnosis and/or treatment of P. aeruginosa-caused				SQ Sequence bls AA;	1.68e-13 Length: 302.00 Matches:	larity: 34.8% imilarity: 29.0%	10.6% Indels:

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with alternation intervention. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial composition acidosis and stroke (MERRP), mycolonic epilepsy ragged red fibre syndrome (MERRP) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        387
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           342
